

## Superior Access with our NEW Sterile Single-use Watson Cheyne Dissector

### The Design Checklist

- ✓ Widening incision in the Ligamentum Flavum to gain access to the spinal canal
- ✓ Used in the removal of Kidney Stones from the ureter in General Surgery
- ✓ Flexible device can be used for the mobilisation and removal of degenerative tissue in Orthopaedic and Vascular Surgery
- ✓ Very fine blunt ends with slender curves which allow for high precision and control
- ✓ Avoids the use of traditional re-usable alternatives that are "knobbly and fat"

### Clinicians' Experiences

Don't just take our word for it ...

**"Thanks for your time and effort replicating the Watson Cheyne. The surgeons in Newcastle are very happy with the end result and look forward to using them on a regular basis."**

Hayley McIntyre, Royal Victoria Infirmary

**"I would be very interested in seeing your new dissector"**

Consultant Neurosurgeon, Yorkshire

**"I would be interested in trying a sample"**

Consultant Neurosurgeon, London

### Clinical Value - Dual Ended Dissector for Enhanced Flexibility

Double ended for a wide range of cases  
A delicate Single-use instrument that is precise every time

With 97% of orders sent out the same day we guarantee to meet your service needs, avoiding costly delays. Reducing hospital stock holding and improving lead time for instruments

Different ends to ensure the Dissector is suitable for all patients

No delay to life saving surgery

Eliminates the risk of cross-contamination

This is a cost-effective alternative in comparison to poor quality, cheap instruments that require opening multiple packs per patient

No burden of Sterilisation costs

No cost of replacing re-usable instruments that can be easily bent
