# 9 Things that make perfect single-use crocodile forceps

1 Get a grip!

Misaligned tips can mean the force needed to hold something is excessive and not sustainable.
2

Does size matter?

Single-use products have their differences sometimes they are too short and hard to reach into the ear canal, or conversely too long and not comfortable to use.
3 Microscopic attention

Blemishes, reflections, true and straight

Everything is magnified so you will notice immediately when things are not right. Traditionally this has been an important reason for the switch to Single-use and our responsibility is to maintain the quality even under such a focus.
4 Pattern makes perfect!

Hartman, Henckel, Ormerod Forceps and Scissors are just a few to mention and each is adapted to suit a particular functions with serrated, cupped, elongated jaws or straight or curved blades

5 Speculate on jaw size

Small is beautiful!

For Paediatric use or where good vision is critical, our Extra Fine Crocodile Forceps offer a jaw size of 3.5mm by 0.9mm.

3.5mm by 0.9mm fit easily

6 Does the jaw open?

Surgeons need the jaw to open adequately to perform the intended function; not all do! This suggests that others suppliers compromise on quality.

7 Width matters too!

The finest jaws can only be realised by having a slender shaft that still retains the strength needed to hold the jaw in place when operated.

8 Is it clean?

Our Crocodile Forceps receive 100% inspection to ensure they are free from contamination.

9 Quality assurance

100%

We conduct full inspections and dimensional checks on every instrument.

Perfection delivered

Crocodile Forceps have been a core product in our development over eleven years. As one of the first lines we identified as needing improved quality, it has served as a benchmark for much of our more recent innovation.

However, all the investment in getting the product right only matters when we deliver it consistently as partof a service our customers can rely on. 97% of all our orders are despatched the same day in which they are received.
